Subject: report temperature extreems - Heating/Colling update

As we remain patient with the completion of the new heating/cooling system, I have good news (for those of us wearing polar fleece!). Scott Hennigan would like to hear from us if we are working in areas with extreme temperatures. Please let Scott or I know if your office/lab is less than 60 degrees F and/or greater than 80. A list will be made for the contractor to investigate/correct locations with extreme temps.

There remain a few steps to be completed on the new heating/cooling system before it is functioning at 100%. These steps should be completed by August.
